

CERT

CERT, the home of the well-known CERT® Coordination Center, is located at [Carnegie Mellon University](#)¹'s [Software Engineering Institute](#)². CERT experts study internet security vulnerabilities, research long-term changes in networked systems, and develop information and training to help organizations improve security.

Our areas of focus are

- software assurance—CERT analyzes the state of internet security and works to prevent and address vulnerabilities.
- secure systems—CERT's work in survivable systems engineering involves analyzing how susceptible systems are to sophisticated attacks and proposing better designs for such systems.
- organizational security—CERT helps business leaders build security into corporate culture.
- coordinated response—CERT works with sites to help them for their own computer incident response teams and also develops forensics tools and techniques for responding to criminal activity on computer systems.
- training—CERT offers public training courses for technical staff, managers of computer security incident response teams, system administrators, and other technical personnel who are interested in learning more about network security.
